SUMMARY

Software Engineer experienced in developing innovative global products, building scalable backend systems, and leading cross-functional projects at Netflix, Lyft, and ProTag. Track record of driving revenue, efficiency, and user engagement.

TECHNICAL SKILLS

Languages/Frameworks: Python, Java, TypeScript, SQL | Flask, Spring Boot, React, Next.js, SQLAlchemy
Data/Infra: Kafka, Cassandra, PostgreSQL, Redis, DynamoDB, pandas, scikit-learn | AWS, Kubernetes, GraphQL, gRPC
AI-Assisted Development: Claude Code, Codex, GitHub Copilot

PROFESSIONAL EXPERIENCE

ProTag (WhoProduced.org) | Founder **Feb 2019 - Present**

- Founded and scaled a music almanac platform to 70K monthly active users, integrating Genius API and Bandsintown partnership for monetization. Designed and implemented interactive D3/Chart.js data visualizations and a k-means ML algorithm to reveal artist patterns. Managed all aspects of product development, user acquisition, and data analytics.

Netflix | Software Engineer **Jan 2024 - Apr 2026**

- Increased panel enrollment rate and engagement by 2% for Netflix Preview Club, a pre-release content screening program over 100K customers are invited to provide feedback to improve on-service content, via campaigns and algo-based targeting strategies I developed with communication channels such as email, push, and in-app notifications.
- Earned millions in revenue annually for Netflix by maintaining a portfolio of price increase messages that encouraged users to keep their service and fulfill Netflix's regulatory obligations to keep users informed of account changes.
- Saved Audio Visual Producers and Fulfillers time and money by designing and implementing the cross-functional revamp of the planning and ordering process for assets used to market titles globally to over a quarter billion users. Successfully user acceptance tested and launched with backward compatibility and without app downtime/incidents.

Lyft | Software Engineer **Jun 2019 – Nov 2022**

- Increased driver stats such as sessions (1.4%), hours (0.9%), retention (0.85%), and more by independently designing and developing the Driver Content Relevance Engine, which got drivers back on the road without expenditure. Ran successful experiments on millions of drivers by working cross-functionally with Data Science to develop the machine learning algorithm leveraged by this program and Marketing to create over 20 personalized message templates.
- Reduced latency on my team's main service from over a minute to milliseconds, making it more reliable and available, preventing timeouts, and improving the on-call experience by implementing a Redis cache.
- Saved millions of dollars by shortening the case resolution time for customer support agents from 30 minutes to two minutes by building the front and back ends of a bulk refunding tool.

Lyft | Autonomous Vehicle Engineering Operations Analyst **Aug 2018 – Jan 2019**

- Saved millions of dollars by building and maintaining the budget and improving reporting across Lyft's six global sites.
- Secured millions more in funding for autonomous vehicle operations by successfully pitching the 2019 budget, which I independently created and harvested and presented data and visualizations for, to the CEO, CFO, and FP&A Directors.
- Enabled executives to make hiring and product decisions and meet partnership and board meeting obligations by pulling and preparing financial and operational data and building automated dashboards, data visualizations, and decks.

Lyft | Financial Data Analyst **Apr 2016 – Aug 2018**

- Readied Lyft for its IPO as the first rideshare company to go public by producing and presenting ride financial data and creating queries and dashboards on billing systems to automate reporting for SEC compliance and other auditors.
- Shortened accounting month-end close for four GL accounts from 27 days to three days and solved and prevented millions of dollars in fiscal loss by automating reconciliation of data sets from payment providers and vendors in SQL.

EDUCATION

- **University of Southern California**, B.A. Economics, Business Law Minor
